REVISE OUR LAWS

Wagon in Business Procession.

BRUSH AWAY DRY ROT

Laws Needed Which the Nation Can Follow Intelligently.

the present industrial ills of the nation. suggestions for relief, are had in the week's market letter of James A.

The general securities markets show continued weakness, but after such a

The general securities markets show continued weakness, but after such a long and drastic decline the downward symptoms should soon disappear and a moderate recovery set in. Unquestionably thore has been a great deal of what is termed "scientific selling," and apparently it has been more of a liquidating market than a bear market, but there is getting to be a little too much company on the selling side to suit us. The pendulum of prices swings both ways even in times of depression.

The business of the country is at a standstill on account of lack of confidence in the future. Enterprise has ceased and no one will undertake anything new. The manufacturers, builders and railroads refuse to go ahead with their ordinary business in the way of buying supplies. That which is absolutely necessary is purchased and no more. If this condition continues the arteries of trade will suffer from paralysis and diy rot. The root of the cvil is lack of confidence brought about by the attempt of theoretical lawmakers to make rules and regulations for the conduct of business conditions that are twenty years ahead of their ideas. The great business men and the industries they represent have for years been assailed by government and politicians, and this has been due to the fact that the latter have been so far behind the business bund wagon that they could not keep in step with the march of progress.

Results Are Seen.

Results Are Seen.

Results Are Seen.

he obstacles of ignorance and prejutation of the country slowing down of great engines of industry. The gent of the country is becoming ressed and surely will not again bette active while the great enterprises the country languish. There will be change in conditions until the people the country wake to the fact that y have been following false leaders and ceed to place the brand of disapproval in political demagogues. It is the great rgy and industry of the business menthe country that has made it the commercial wonder of the nations of the rid, and not the politicians. What seff will the country derive if it sueds in driving out of it several hundred dit-millionaires with their masterly lities? Surely there is not another interpretable on the politicians who have them with their brains and money. The people may be forced to make a pice between the politicians who live in them and the great captains of intry who furnish the basis of prosperity it livelihood for all. The shadow of the ead the will probably hasten the defon. Capital has been harassed until has become timid, but we hope and leve this is but a temporary condition dives this great America still exists and at common sense will again prevail.

about those bank robbers who got away with the coin up in Canada and had to leave \$100,-000 behind because they couldn't carry it, we can't help but wonder why they didn't wire for a blue wagon.

DOING GREAT WORK

Up Profits of Magnitude.

Thompson, Towle & Co. give the following account of the Nipissing and La Rose operations of the Cobalt section, Production at the Nipissing mines in August amounted to 431,839 ounces, having a net value of \$224.555, and the ore shipments in that period had an estimated net value of \$161.980. During the month a new shaft, sknown as No. 156, was started in the southwestern portion of the company's territory. In this section, which is located adjacent to the Savage mine of the McKinley-Darragh, summer prospecting has met with quite encouraging results and several calcite veins of more or less promise have already been opened. As a result of the disclosures made in this surface work it was decided to sink the shaft as the showings uncovered warrant considerable development underground. The first level will be driven at eighty-five feet.

High Silver Values. ing a net value of \$224,555, and the ore

High Silver Values.

Developments at vein No. 73 continued favorable, the raise which is being put through from the first to the second level continued in ore. This work is now completed and preparations for stoping are now under way. For the last fifty feet in the raise the vein averaged five inches in width and carried 2500 concess of silver per ton. On the 250-foot level, where in July the vein was considerably broken up, the formation is now more favorable and the ore is averaging five inches in width and carrying about 2000 concess or silver per ton, with the vein maproving in drifting eastward. At vein No. 80 some good ore has been carried on for 120 feet over the entire distance the vein averaging one inch in width and carrying from 1209 to 1500 concess per ton. Plans are now being prepared for the erection of a central jigging plant at the Nipissing property to be located at shaft No. 72, which will receive all of the ore from the various shafts situated in the area adjacent to the town of Cobalt. During the month approximately 8000 feet of trenching was done, most of which work was confined to a diabase formation. This work however, disclosed no new veins.

La Rose Operations.

Operating profits for La Rose Mines. Ltd. for the month of July amounted to High Silver Values.

La Rose Operations.

Operating profits for La Rose Mines.
Ltd. for the month of July amounted to \$195,121. During the period there were produced 326,822 ounces of silver, having a gross value of \$171,835. Sundry Income amounted to \$1045, bringing the total income for the month to \$172,881. Total expenses were \$67,760 resulting in the operating profit as shown above.

For the seven months of 1911 ending July 21, total production amounted to 2.-182,798 ounces, having a gross value of \$1,131,489. The total income for this period was \$1,129,599. Deducting from this, market expenses, concentrating and total operating expenses at the mine of \$392,845, there resulted an operating profit for the seven mouths of \$146,751.

Monthly profits at Ls Rose have averaged for the year approximately the same as they were for July, that is, at slightly over \$195,000 per month. La Rose is on an 8 per cent dividend basis, which calls for earnings of \$50,000 per month. It will be seen from the above that the company is earning more than double its dividend requirements, and gradually increasing its large surplus, which at the present time is more than \$1,300,000.

SHORTS HURRY TO

COVER SATURDAY (Over Badger Bros. Frivate Wire.)

New York—Stocks advanced vigorously at the beginning of the second hour, but afterward reacted a little while still matintalning a large degree of underlying strength. The advance was large on the covering of shorts and when traders found that no one seemed to be following them in their rush to cover they slackened their bace and a little reaction resulted. A close observer said the market seemed to be almost entirely free from bullish manipulation and that if the advance became rather too rapid the fault was with the bears who bid stocks up against one another in their scramble to cover contracts.

A banker often credited with knowledge of what is passing in administrative circles in Washington said of the rumor that the Harvesier suit had been held up by order of the president; "I am inclined to believe that the government has become cognizant of the effect of its attentions on business conditions and contemplates a more conservative course." (Over Badger Bros.' Private Wire.)

e bank statement was fairly good .-Ore Shipments.

The Utah Ore Sampling company on Saturday released a cars of one from Utah and one car each from Nevada and Idaho camps.

WILL GO THROUGH

Work at Goldfield Is Assured.

GOLDFIELD, Nev., Sept. 16 .- It nov appears to be almost a certainty that negotiations which have been in progress mondfield Black Butte company have been successful and that definite announcement will be made shortly of the terms of the deal and of the plans of the new owners to develop the property upon a broad scale. This work will probably take the form of exploring at creater depth than any at which the property has been worked in the past, with a view to getting under the big flat vein which made a large production of shipping ore several years ago. The early production of this property, in shipping ore and all from companyively shallow workings, is estimated to have been considerably over a half million dellars and there is a large formage of excellent milling ore now exposed in old workings and on the large dumps about the batte.

The proposed deal for the Black Butte, property, which will result in its thorough development. Is one of the greatest interest to Goldfield and to all who are interested in mining in the district. It has long been regarded as one of the most valuable properties, potentially, in the district, and during the past three years lessees, operating on a small scale and in shallow drifts or tunnels, have produced small quantities of pay ore almost continuously and three leases are producing at the present time while another lease has just been granted to responsible men of ample means who will proceed to develop ground near the flat vein and on the 300 level.

Addoining the Flack Butte on the north the Goldfield Belmont is producing ore of excellent grade from the 200-foot level of its old workings and has begun sinking a new deep shaft at a point farther to the southeast. This company is controlled by some of the largest stockholders of the Tonopah Belmont company, and the presence operations are conducted under the direction of the latter company's engineers and manager. Within a few days the Goldfield Belmont has shipped 32 per ton, it is said that on the 300-foot level the ore averaged fully \$40 per ton for a width of seven feet. mondfield Black Butte company have been successful and that definite announce

SOME DAYLIGHT IS ENTERING MARKETS

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

Paine. Webber & Co. Boston—There was a much more cheerful feeling and better tone to the local market. Demand for better class of stocks was fair. with the sumply exceedingly small. Lake was the strong feature, selling up easily to 26. Pressure was removed in the New York market and shorts had to climb for stocks in covering. There is no particular reason to get very buillish on the market at this time, but the hear side has been played to a standstill and the level is too low to make that operation very profitable. Believe in buying the better class of coppers on a scale from this level.

Logan & Bryan, New York—The week closes with a numb better feeling in evidence both here and abroad. The chance in sentiment, though by no means unanimous, resulted primarily from a more cheerful feeling relative to the outcome of the Moroccan affair. The New York stock market has been forced to absorb a large amount of limidation, not only for domestic but also for foreign actual development works the declines in view of the fact that the investment inquiry has been very small and banking support not constant.

Vanadium and Uranium Ores Abroad.

MILL MAY BE ERECTED

Many Experts Give Utah Section Recent Visits, Say

ount of the sale of twenty-one tons of uranium and vanadium ores by Forsman & Ward to the American Vanadium com-pany of Baltimore. William Kearns, the

eron already operates a similar mill in Philadelphia.

A great many assays of the San Rafael Reef uranium-vanadium ores have been shown, ranging all the way fro mi 20 per cent John oxides up to 20 per cent. Three assays were made by different metallurgists in different cities, on the ore in the twenty-one-ton car which leaves this week for Liverpool; they ranged 7.20, 7.32 and 10.57 per cent.

No less than three experts have recently examined San Rafael Reef mines and all have expressed great surprise at the richness of the ores as the veins go into the hill. There have been some thirty or forty claims located along the reef and ore croppings are very plainly seen for three and a half miles. Strangely, all of the croppings are at about the same level—about 4480 feet above sea level, or 400 feet higher altitude than Green River station.

feet higher allitude than Green Rivstation.
Radium is made from uranium and tvanadium is used to harden steel, or one ion of it being needed for each 10 tons of steel. This increases the life steel about threefold.

BARRY-COXE LETS CONTRACT FOR TUNNEL

The Barry-Coxe Mining company, whose property is situated on Scott hill in Park City, has just let a contract to J. B. Dumont, superintendent of the company, to drive a tignnel about 200 feet to intercept ore bodies which have been discovered in incline and vertical shafts. The work will be done under the supervision of George E. Coxe, general manager of the company, and will mean considerable toward the development of the property. The owners of this property say that they are now getting down to a good, substantial basis and that permanent development work is being done which will have commercial ore out of the mine in the near future. They claim to have a good financial basis and to be running the mine in an economical and intelligent manner. Mr. Dumont is well versed in mining and has made a well versed in mining and has made a study of this particular camp and sec-tion. He has held former positions at some of the leading camps of Colorado.

Reports.

uranium and vanadium ores by Forsman & Ward to the American Vanadium company of Baltimore. William Kearns, the representative of the company, was in the field to secure this shipment for his firm, and the shipment will be made to Liverpool. The shippers received \$1.20 per pound for their rock.

It is rumored in Green River that F. J. Cameron of Philadelphia is to erect a reduction works in that vicinity for the treatment of rare metal ores, and this, if true, emphasizes the growing importance of Utah as a rare-metal field. The Dispatch says that this rumor is made plausible by the fact that Mr. Cameron recently secured an option from F. S. Pusey for the purchase of the latter's sulphur mines at San Rafael. The price of this option is said to be \$150,000.

The Pusey sulphur mines contain an unlimited quantity of the highest grade sulphur, assaying \$5 per cent pure 1850 some gold. The sulphur is needed in the reduction of the joint oxides that will be handled at the proposed mill, Mr. Cameron already operates a similar mill in Philadelphia.

A great many assays of the San Rafael Reef granium-vanadium ores have been

Mining Notes.

Mining Notes.

Jinks Neison of Park City recently received about ten pounds of high-grade gold ore which his brother sent to him from Dobbins. Yuba county, California His brother, I. C. Neison, is intereste in some of the mines there, which is about forty miles north of Marysyllie.

W. H. Tobias, who is in charge of timining building at the Utah state felleft this morning for the Tintle district to collect specimens for exhibition at the fair. He will visit all of the innest there and their go to each of the other mining camps of the state. He says that the collection of minerals this year at the fair will be the finest ever seen here.

of Nevada.

Encouraged by the early operation of the Mason Valley custom copper smel-ter, the officials of the newly organized Yerington Copper company are making preparations to resume operations, and from the expert advice submitted to the officials it appears that the company can enter the ore shipment and self-sustain-ing column before the end of the year. The property is located within a short distance of the smelter, it is a down-hill pull and enough ore already exists in sight to justify expectations of early returns.

in sight to justify expectations of early returns.

Director Joseph B Caine, secretary of the Commercial club, has returned from a visit to the property, and he views the future with every confidence. Mr. Caine has been connected with the company from the time the first shaft location was made. The shaft has explored the group to a depth of 400 feet.

Mr. Caine also is connected with the Wheeler Gold Mines company, the property of which company is in the Mason section. The mill on this property has finished a six weeks' run and \$2600 worth of gold bullion was the result. The management believes that the rather complicated vein system of this mine has been determined at last and with a little more prospecting on the levels now gained the shaft will be continued and the veins picked up at continued and the veins picked up at continued and the veins picked up at continued and the weins pic

Metal Market

The metal quotations for Saturday, given by McCornick & Co., were as follows: Silver, 523c, lead, \$4.50; copper, \$12.20.

AND LEAD ORE HERE

Congress Far Behind Band Nipissing and La Rose Piling Another Important Bit of Green River Owners Sell Director Caine Back From Santaquin District Is the Next Camp Certain to Give Results.

> the Mason Valley custom copper smel-pailver and lead producing camp to in crease its prestige among the producing states is not to be denied, and the most promising-looking section today is the Santaquin camp, where frequent find-Santaguin camp, where recouent findings of fine-grade ore are being made." said Joseph Ulmer, the mining engineer and general manager of the Santaguin Central company. This district is easily reached, being located in the Wasatch range of mountains about seventy miles south of Salt Lake (Etv. Santaguin is the railroad point on the Salt Lake Route, from which noint it is not over four miles to the heart of the active and accomplishing properties.
>
> Mr. Ulmer says that in addition to his property there are a number of others hard at work, among which are the Santaguin Chief. Union Chief. Eva. Syndicate. Spring Lake, Eagle Copper, Granite, Higginson and many others. The camp is full of prospectors and no other section of the state presents greater opportunities today.
>
> The great fissure vein of the Union Chief property continues across the Central group of Mr. Ulmer and associates for 4500 feet, these two properties endining north and south. A new tunnel is being driven to cut this vein and ore is expected in 150 feet from the present face. Work will be continued all winter.
>
> Two new strikes of spiendid silver and ings of fine-grade ore are being made.

face. Work will be continued an warter.

Two new strikes of spiendid silver and
lead are on the Eva and the Higginson
properties are creating no end of interest
in that section and the news has stirred
up considerable interest in this city also.
The Eva has ten feet of ore which Mr.
Ulmer pronounces fine material for the
smelters. The Higginson find is along
the same fissure, but at a distance of one
and a half miles from the Union Chief,
showing the great length of the lending
yein of the district.
